

Rize Industries, LLC.
12" Suspension Lift Kit
2005/2006 Ford SuperDuty
Part# 410-312-042

While This Kit Is An Easy Bolt-On System, Rize Industries Strongly Recommends That A Professional Installation Center Be Contracted To Do The Install.

Rize Industries Also Recommends Using A Hydraulic Lift When Performing This Installation.

Before Starting The Installation Of This Kit On A Vehicle There Are A Few Points That Need To Be Noted:

- This 12-inch kit installation packet is to be used in conjunction with the 8-inch kit installation packet.
- Verify The Application And Part# Are Correct, & That The Kit Inventory Is Complete. Then Thoroughly Read And Understand All Instructions Before Beginning The Install On The Vehicle.
- Installation of this kit requires that the brake lines be changed, and the brake system be properly bled. Only qualified personal should be allowed to perform these operations.
- Extreme front drive shaft modifications or replacement will be required. While Rize Industries can provide recommendations, the responsibility for these modifications is completely left to the installer &/or owner of the vehicle.
- While Rize Industries has engineered the kit to be an easy bolt-on system it will require some drilling and removal of four factory rivets.
- Additionally, this is an extreme lift system and will require more time and attention to detail than an average lift kit.
